

# CE EMC TEST REPORT

For

## Laptop Computer

**Brand Name:** OLPC  
**Model NO.:** XO-4 HS / XO-4 / XO-4 HS Touch / XO-4 Touch  
**Report NO.:** 20130222-1  
**Issued Date:** Feb. 22, 2013  
**Issued By:** Compliance Laboratory of Tech-Front (Shanghai) Computer Co., Ltd  
**Lab Address:** No. 68, Sanzhuang Road, Songjiang Export Processing Zone, Shanghai, P. R. China  
**Tel:** +86-21-3781-8168  
**Fax:** +86-21-6774-7135

The test result relate only to the samples tested. The test report shall not be reproduced except in full without the written approval of our laboratory. This report must not be used to claim product endorsement by CNAS or any agency of the Government. The test results shown in the test report are traceable to the national/international standard through the calibration of the equipment and evaluated measurement uncertainty herein.

# Test Report Certification

**Applicant:** Quanta Computer Inc  
**Manufacturer:** Quanta Computer Inc  
**Product:** Laptop Computer  
**Brand Name:** OLPC  
**Model Number:** XO-4 HS / XO-4 / XO-4 HS Touch / XO-4 Touch  
**Tested Voltage:** 230V<sub>AC</sub>, 50Hz  
**Tested Date:** Jan. 09-Jan. 13, 2013

**Applicable Standards:**

**Emission:** EN 55022: 2010, Class B  
 EN 61000-3-2: 2009, Class D  
 EN 61000-3-3:2008

**Immunity:** EN 55024:2010  
 EN 61000-4-2:2009  
 EN61000-4-3:2006+A2:2010  
 EN61000-4-4:2004+A1:2010  
 EN 61000-4-5:2006  
 EN 61000-4-6:2009  
 EN 61000-4-8:2010  
 EN 61000-4-11:2004

<b>Test Result</b>	No non-compliance noted
--------------------	-------------------------

The above equipment has been tested by Compliance Laboratory of Tech-Front (Shanghai) Computer Co., Ltd. , and found compliance with the requirements set forth in the Electromagnetic Compatibility Directive 2004/108/EC and technical standards mentioned above. The result of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

## Section 1: General Information

### 1.1 Test Result summary

Emission			
Standard	Item	Result	Remarks
EN 55022: 2010	Conducted (Main Port)	PASS	Meet Class B limit
	Conducted (Telecom port)	PASS	Meet Class B limit
	Radiated	PASS	Meet Class B limit
EN 61000-3-2: 2009	Harmonic current emissions	PASS	NA
EN 61000-3-3:2008	Voltage fluctuations & flicker	PASS	Meets the requirements

Immunity 【EN 55024:2010】			
Standard	Item	Result	Remarks
EN 61000-4-2: 2009	ESD	PASS	Meets the requirements of Performance Criterion B
EN61000-4-3:2006+A2:2010	RS	PASS	Meets the requirements of Performance Criterion A
EN61000-4-4:2004+A1:2010	EFT	PASS	Meets the requirements of Performance Criterion B
EN 61000-4-5: 2006	Surge	PASS	Meets the requirements of Performance Criterion B
EN 61000-4-6: 2009	CS	PASS	Meets the requirements of Performance Criterion A
EN 61000-4-8:2010	PFMF	PASS	Meets the requirements of Performance Criterion A
EN 61000-4-11: 2004	Voltage dips & voltage variations	PASS	<p><b>Meets the requirements of Voltage Dips:</b></p> <p>1) &gt;95% reduction Performance Criterion B</p> <p>2) 30% reduction Performance Criterion C</p> <p><b>Voltage Interruptions:</b></p> <p>1) &gt;95% reduction Performance Criterion C.</p>

- Note:** 1) The test result judgment is decided by the limit of test standard  
 2) The information of measurement uncertainty is available upon the customer's request.

## 1.2 Introduction

Product	Laptop Computer		
Trade Name	OLPC		
Model Name	XO-4 HS / XO-4 / XO-4 HS Touch / XO-4 Touch		
Housing Type	Plastic		
AC Power Adapter	Bestec	Model	NA0241WAA
			BT-AG250SDF
	Darfon	Model	BU24-1203
			BB0J-C
			BP24-1203
AC Power Adapter Rating	I/P: 100-240Vac O/P: 13.5Vdc,1.85A/12Vdc,2A		
AC Power Cord Type	Non-shielded AC 2pin (0.9m)		
DC Power Cable Type	Non-shielded DC (1.5m) /Non-shielded DC (1.8m)		
EMMC	4GB / 8GB		
Memory Capacity	1GB / 2GB		
CPU	Marvell	Model	PXA2128 (1.0GHz)
			PXA2128 (1.2GHz)
7.5" LCD Panel	CHIMEI	Model	G075ADE-T01
Camera	SUYIN	Model	CM0316-OLPC01
			CM031B-SE01
	FOXLINK	Model	FE03FF-317H
WLAN	QMI	Model	EM113-MV
	Liteon	Model	WCBN603MH
Battery	BYD	Model	CL1
	STL	Model	XO-1

I/O Port:

I/O Port Types	Quantity
Audio in port	1
Audio out port	1
USB port	2
HDMI port	1
SD Card port	1

### 1.3 Test Procedure

The EUT was tested using special test software called H patterns, which exercises all external I/O ports as well as the internal storage media by writing and reading (if applicable) a continuous stream of “H” characters in font 9. A pattern of continuous stream-scrolling black “H” on a white background was written to display. Played through the internal audio while the EMC testing was being done. The measurements were made while the system was exercised in this manner.

## Section 2: Test Facility and Procedure

### 2.1 Test Facility Used for Emission Testing

**Conducted Emissions Facilities:** Conducted Emissions were performed at Compliance Laboratory of Tech - Front (Shanghai) Computer Co, Ltd of No.68 Sanzhuang Road, Songjiang Export Processing Zone, Shanghai, P. R. China  
FCC Registration No. 602285  
VCCI Registration No. C-2529/ T-1836

**Radiated Emissions Facilities:** Radiated Emissions measurements were performed at Compliance Laboratory of Tech-Front (Shanghai) Computer Co., Ltd. of No.68 Sanzhuang Road, Songjiang Export Processing Zone, Shanghai, P. R. China

FCC Registration No. 602285

VCCI Registration No. R-2319 (10m Chamber)/ G-191 (10m Chamber) / R-3341 (3m-2Chamber) / G-209 (3m-2 Chamber) /R-2320 (3m Chamber site 1)

Note: "R-"to represent bellows 1GHz, "G-"to represent above 1GHz.

#### 2.1.1 Measurement Uncertainty

The measurement uncertainty has been determined to be the following:

AC Conducted Emissions = 3.2 dB

Telecom Conducted Emissions = 3.5 dB

Radiated Emissions (30MHz~1000MHz) = 4.1 dB

Radiated Emissions (1000MHz~18000MHz) = 4.6 dB

The equipment conforms to the requirement of CISPR 16-1, CISPR 16-4-2, ANSI C63.2 and other required standards.

Calibration of all test and measurement, including any accessories that may effect such calibration, is checked frequently to ensure the accuracy. Adjustments are made and correction factors are applied in accordance with the instructions contained in the respective manual.

### 2.1.2 Lab Accreditations

Coverage	Agency	Scope of Accreditation
USA	FCC	3/10 meter chamber and conducted test chamber to perform FCC Part 15/18 measurements
Japan	VCCI	3/10 meter chamber and conducted test chamber to perform radiated / conducted measurements
ISO/IEC 17025	CNAS	FCC 47CFR Part 15; CISPR22; AS/NZS CISPR 22; V-3/2008.04; GB9254; GB17625.1; EN55022; EN61000-3-2; EN 61000-3-3; CISPR24; EN55024; IEC/EN61000-4-2; IEC/EN61000-4-3; IEC/EN61000-4-4; IEC/EN61000-4-5; IEC/EN61000-4-6; IEC/EN61000-4-8; IEC/EN61000-4-11

### 2.1.3 Software to Exercise EUT

The EUT was tested using special test software called H patterns, which exercises all external I/O ports as well as the internal storage media by writing and reading (if applicable) a continuous stream of "H" characters in font 9. A pattern of continuous stream-scrolling black "H" on a white background was written to display. Played through the internal audio while the EMC testing was being done. The measurements were made while the system was exercised in this manner.

### 2.1.4 Special Accessories

There were no special accessories used during these tests.

### 2.1.5 Equipment Modifications and Deviations

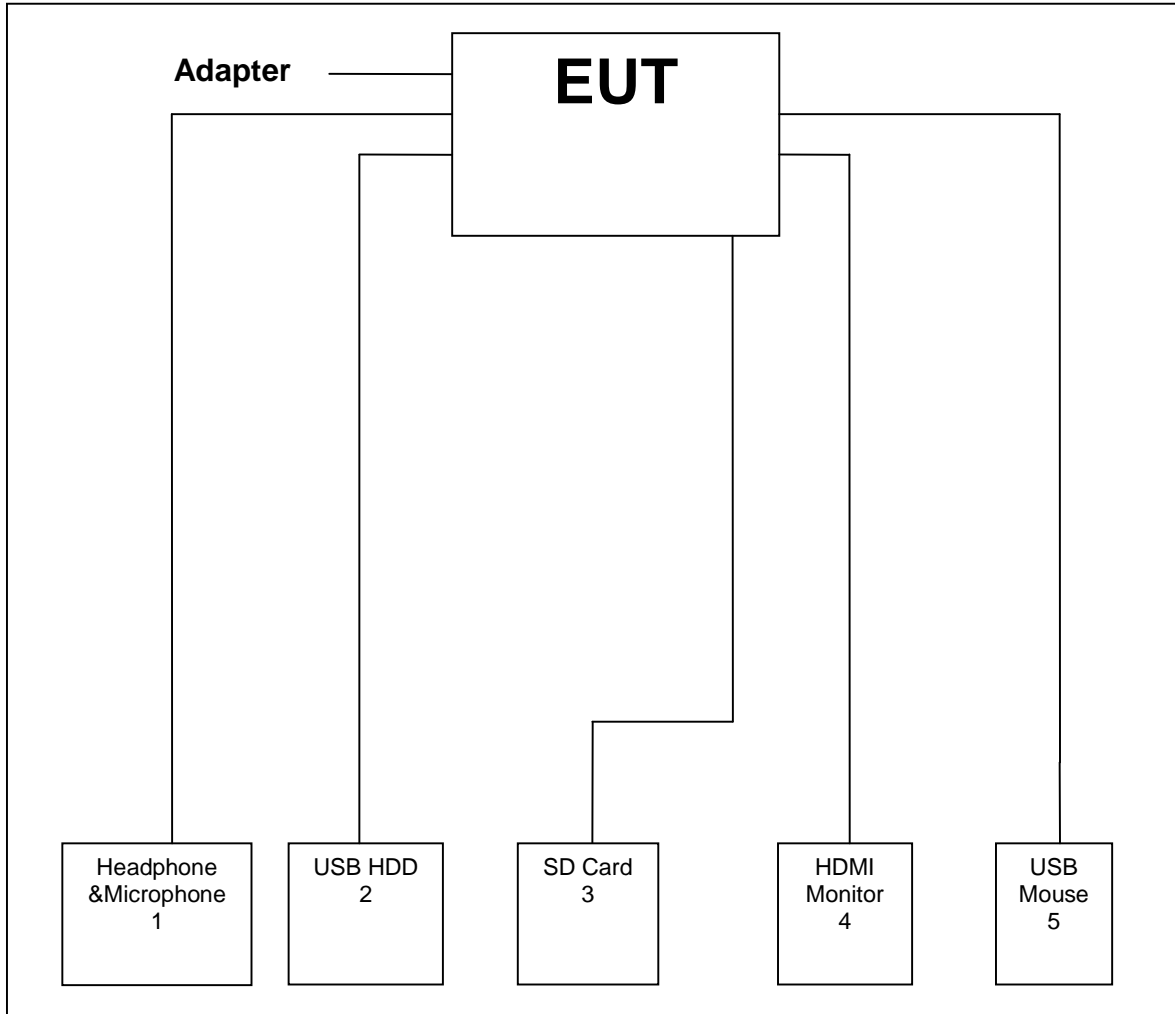

There is no EUT modification or test standard deviation.

### 2.1.6 Test Configuration

The EUT was configured as a worst case system configuration as a result from pre-testing as described below:

#### Arrangement Block Diagram

#### Associated Equipments

No.	Interference	Equipment	Brand	Model
1	Audio in & out port	Mic & Headphone	Philips	SHM3300
2	USB port	HDD	Seagate	5VCA0X2F
3	SD Card port	SD Card	Kingston	4GB
4	HDMI port	Monitor	DELL	2709Wb
5	USB port	Mouse	Logitech	M-BP82

**Pre-test configuration**

Prior to taking the formal emissions data collected in this report many hours of pre-testing have been performed. The selection of the worst case system documented in this report was based upon this pre-testing.

## **Section3: Electromagnetic Emissions Test**

### **3.1 Emission**

#### **3.1.1 Line Conducted Emissions Test**

##### **- Measurement Procedures Utilized for Conducted Emissions**

The EUT was set up as per the test configuration to simulate typical usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per EN 55022.

Associated equipment, if needed, was placed as per EN 55022.

All I/O cables were positioned to simulate typical actual usage as per EN 55022.

The test equipment EUT installed received AC power through a Line Impedance Stabilization Network (LISN), which supplied power source and was grounded to the ground plane.

All associated equipment received power from a second LISN.

For conducted emission test on telecommunication ports, a telecommunication port is connected by its signal cable to an impedance stabilization network (ISN). During the testing, the LAN utilization is in excess of 10 % and sustains that level for a minimum of 250 ms. the traffic rate is monitored by the program of Net Speed.

The EUT test program was started. Emissions were measured on each current carrying line of the EUT using an EMI Test Receiver connected to the LISN powering the EUT.

The Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

During the above scans under battery charging mode, the emissions were maximized by cable manipulation.

The EUT configuration and cable configuration of the above highest emission level were recorded for reference of the final test.

**- Limits**

**For AC Power**

Frequency (MHz)	Class A (dBuV)		Class B (dBuV)	
	Quasi-peak	Average	Quasi-peak	Average
0.15 - 0.5	79	66	66 - 56	56 - 46
0.50 - 5.0	73	60	56	46
5.0 - 30.0	73	60	60	50

- Note:** 1) The lower limit shall apply at the transition frequencies.  
 2) The limit decreases in line with the logarithm of the frequency in the range of 0.15MHz to 0.50MHz.  
 3) All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

**For ISN**

**For Class A Equipment**

FREQUENCY (MHz)	Voltage Limit (dBuV)		Current Limit (dBuA)	
	Quasi-peak	Average	Quasi-peak	Average
0.15 ~ 0.5	97 ~ 87	84 ~ 74	53 ~ 43	40 ~ 30
0.5 ~ 30.0	87	74	43	30

- Note:** 1) The limits decrease linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5MHz.  
 2) The current and voltage disturbance limits are derived for use with an impedance stabilization network (ISN) which presents a common mode (asymmetric mode) impedance of 150Ω to the telecommunication port under test (conversion factor is  $20\log_{10}150=44\text{dB}$ ).

**For Class B Equipment**

FREQUENCY (MHz)	Voltage Limit (dBuV)		Current Limit (dBuA)	
	Quasi-peak	Average	Quasi-peak	Average
0.15 - 0.5	84 ~ 74	74 ~ 64	40 ~ 30	30 ~ 20
0.5 – 30.0	74	64	30	20

- Note:** 1) The limits decrease linearly with the logarithm of the frequency in the range 0.15 MHz to 0.5MHz.  
 2) The current and voltage disturbance limits are derived for use with an impedance stabilization network (ISN) which presents a common mode (asymmetric mode) impedance of 150Ω to the telecommunication port under test (conversion factor is  $20\log_{10}150 = 44\text{dB}$ ).

- Test Setup

**For AC power setup as below**

**For ISN setup as below**

For the actual test configuration, please refer to the related item–Photographs of the Test Configuration.

### **3.1.2 Radiated Emissions Test**

#### **- Measurement Procedures Utilized for Radiated Emissions**

The equipment was set up as per the test configuration to simulate typical usage per the user's manual. When the EUT is a tabletop system, a wooden turntable with a height of 0.8 meters is used which is placed on the ground plane.

Associated equipment, if needed, was placed as per EN 55022.

All I/O cables were positioned to simulate typical usage as per EN 55022.

The EUT received AC power source, from the outlet socket under the turntable. All associated equipment received power from another socket under the turntable.

Mains cables, telephone lines or other connections to auxiliary equipment located outside the test are shall drape to the floor. No extension cords shall be used to mains receptacle.

The antenna was placed at 10 meter away from the EUT as stated in EN 55022. The antenna connected to the Receiver via a cable and at times a pre-amplifier would be used. The receiver scanned from 30MHz to 1000MHz. The EUT test program was started. Emissions were scanned under battery charging mode and measured rotating the EUT to 360 degrees and positioning the antenna 1 to 4 meters above the ground plane, in both vertical and horizontal polarization, to maximize the emission reading level.

The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The height of antenna can be varied from one meter to four meters; the height of adjustment depends on the EUT height and the antenna 3dB beam width both, to detect the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to peak and average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz

The test mode(s) described in Item 2.1.6 were scanned during the preliminary test:

After the preliminary scan, we found the test mode described in Item 2.1.6 producing the highest emission level.

The EUT and cable configuration, antenna position, polarization and turntable position of the above highest emission level were recorded for the final test.

**-Limits**

**For 30MHz~1000MHz**

FREQUENCY (MHz)	dBuV/m	
	Class A	Class B
30 ~ 230	40	30
230 ~ 1000	47	37

**NOTE:** 1) The lower limit shall apply at the transition frequencies.  
 2) Emission level (dBuV/m) = 20 log<sub>10</sub> Emission level (uV/m).

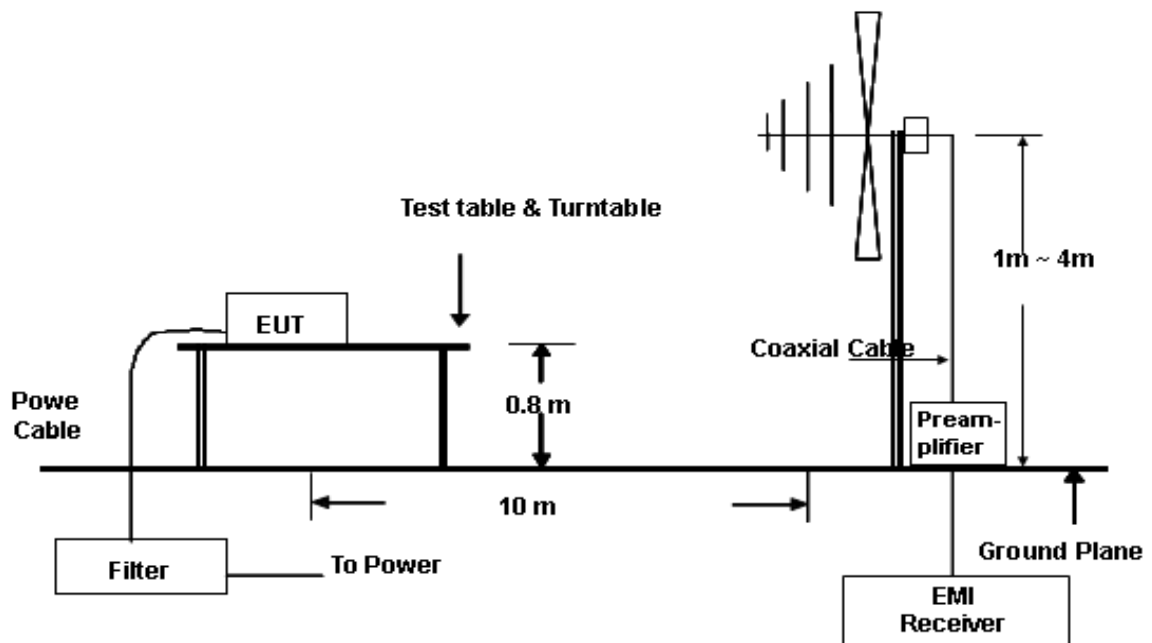

**For 1GHz~6GHz**

FREQUENCY (MHz)	dBuV/m	
	PK Limit	AV Limit
1GHz~3GHz	70	50
3GHz~6GHz	74	54

**NOTE:** 1) The lower limit shall apply at the transition frequencies.  
 2) Emission level (dBuV/m) = 20 log Emission level (uV/m).

**-Test Setup**

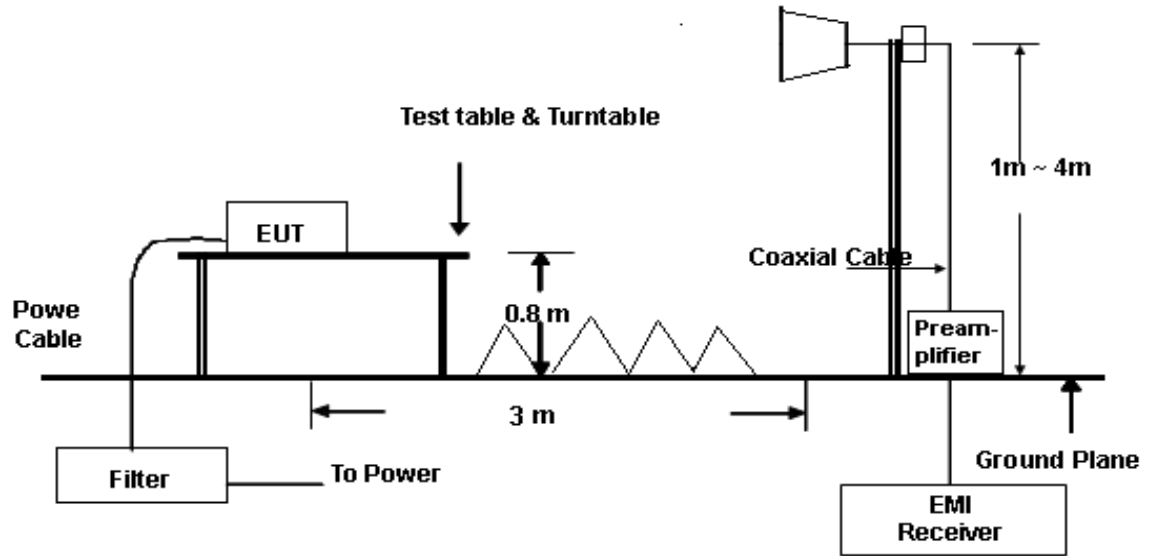

**For 30MHz~1000MHz test setup as below**

For 1GHz~6GHz test setup as below

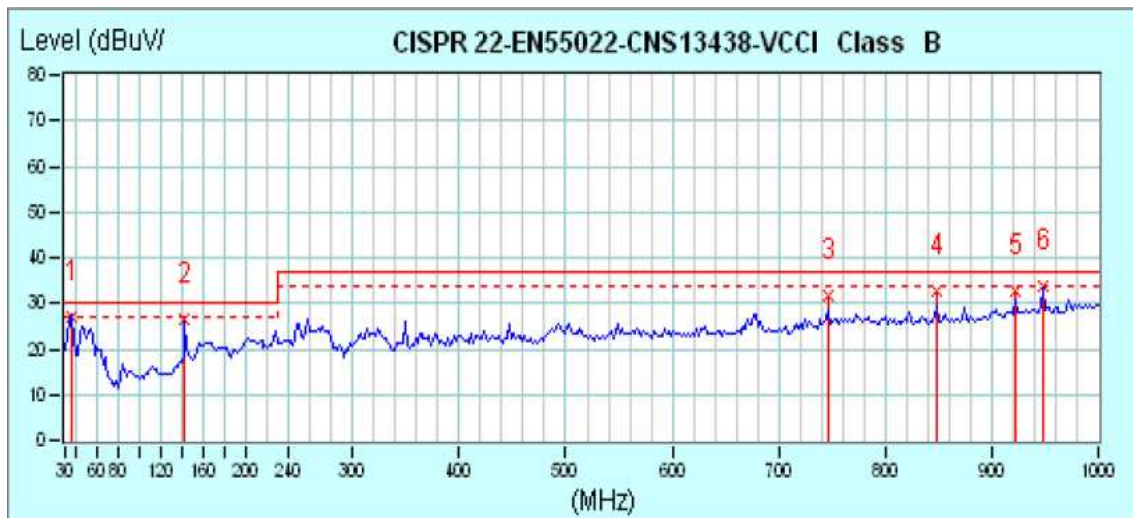

For the actual test configuration, please refer to the related item - Photographs of the Test Configuration.

### 3.1.3 Power Harmonics Measurement

The product was tested and met the requirements specified in EN61000-3-2.

#### - Measurement Procedures Utilized for Harmonics

- 1) The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the maximum harmonic components under normal operating conditions for each successive harmonic component in turn.
- 2) The classification of EUT is according to section 5 of EN 61000-3-2.
- 3) The EUT is classified as follows:
  - Class A: Balanced three-phase equipment, Household appliances excluding equipment as Class D, Tools excluding portable tools, Dimmers for incandescent lamps, audio equipment, equipment not specified in one of the three other classes.
  - Class B: Portable tools; Arc welding equipment which is not professional equipment.
  - Class C: Lighting equipment.
  - Class D: Equipment having a specified power less than or equal to 600 W of the following types: Personal computers and personal computer monitors and television receivers.
- 4) The correspondent test program of test instrument to measure the current harmonics emanated from EUT is chosen. The measure time shall be not less than the time necessary for the EUT to be exercised.

**- Test Setup**

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

**-Test Condition**

Equipment Tested	Laptop Computer
Test Software	H pattern
Test Standard	EN 61000-3-2
Test Operator	Xingming zhao
Date of Test	2013-01-13
Relative Humidity	58%
Temperature	20°C
Atmospheric Pressure	101kPa

**-Test Results**

<b>Fundamental voltage</b>	230V
<b>Power Frequency</b>	50Hz
<b>Observation Date</b>	150sec
<b>Power Consumption</b>	23.01W
<b>Power factor</b>	67.4%
<b>Test Result ( Pass/Fail)</b>	Pass

**Note:** According to EN61000-3-2 paragraph 7 the note1 and 2 are valid for all applications having an active input >75W, others the result should be pass.

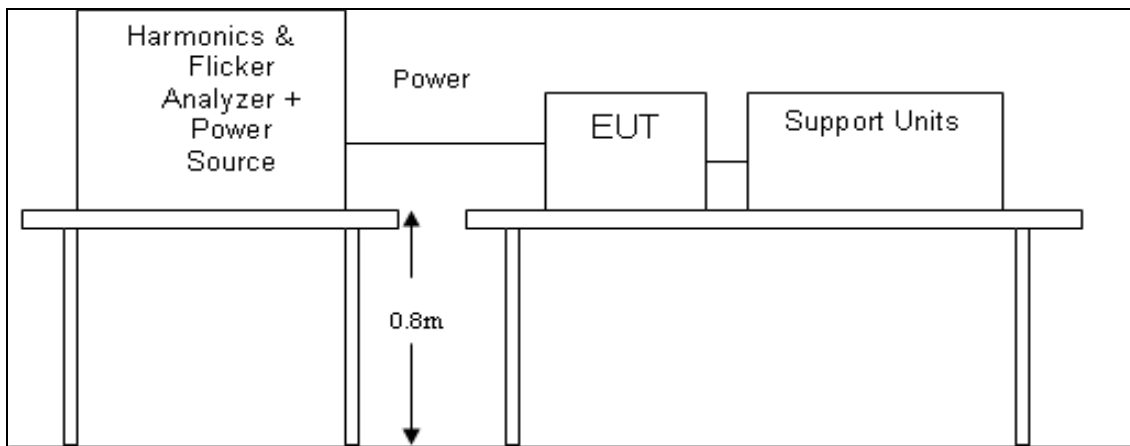

### 3.1.4 Power Voltage Fluctuation/ Flicker Measurement

The product was tested and met the requirements specified in EN 61000-3-3

#### - Measurement Procedures Utilized for Flicker

- 1) The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the most unfavorable sequence of voltage changes under normal operating conditions.
- 2) During the flick measurement, the measure time shall include that part of whole operation cycle in which the EUT produce the most unfavorable sequence of voltage changes. The observation period for short-term flicker indicator is 10 minutes.

#### - Test Setup

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

**-Test Condition**

Equipment Tested	Laptop Computer
Test Software	H pattern
Test Standard	EN 61000-3-3
Test Operator	Xingming zhao
Date of Test	2013-01-13
Relative Humidity	58%
Temperature	20°C
Atmospheric Pressure	101kPa

**-Test Results**

	EUT Values	Limit	Result	Remark
$P_{st}$	0.028	1.00	Pass	$P_{st}$ means short-term flicker indicator
$P_{lt}$	0.028	0.65	Pass	$P_{lt}$ means long-term flicker indicator
$d_c$ [%]	0.005	3.30	Pass	$d_c$ means relative steady-state voltage change
$d_{max}$ [%]	0.077	4.00	Pass	$d_{max}$ means maximum relative voltage change
$d_t$ [s]	0.000	0.50	Pass	$T_{dt}$ means maximum Date that $d_t$ exceeds 3.3%

**3.2 Electromagnetic Immunity Report**  
**-General Description**

Product Standard	EN 55024:2010	
	Test Type	Minimum Requirement
Basic Standard	EN 61000-4-2	Electrostatic Discharge (ESD) 8kV for Air, 4kV for Contact Performance Criteria B
	EN 61000-4-3	Radio-frequency Electromagnetic field susceptibility (RS) 3V/m, 80%AM (1kHz), 80MHz-1000MHz, Performance Criteria A
	EN 61000-4-4	Electrical Fast transient/ Burst (EFT) Power Line:1kV, Signal:0.5kV Performance Criteria B
	EN 61000-4-5	Surge test 1.2/50us (open circuit voltage) 8/20us (short circuit current) AC Power port ( Line->ground 2kV, line->line 1kV) Communication Port (1.2/50us, 1kV) Performance Criteria B
	EN 61000-4-6	Conducted radio frequency disturbance test (CS) 150kHz-80MHz, 3Vrms, 80%AM (1kHz) Performance Criteria A
	EN 61000-4-8	Power Frequency Magnetic Field(PFMF) 50Hz ,1A/m Performance Criteria A
	EN 61000-4-11	<b>Voltage Dips:</b> 1) >95% reduction for 0.5 periods. Performance Criteria B 2) 30% reduction for 25 periods. Performance Criteria C <b>Voltage interrupt:</b> >95% reduction for 0.5 periods. Performance Criteria C

**-General performance criteria description**

<b>Criteria A</b>	The apparatus shell continues to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the manufacturer does not specify the minimum performance level or the permissible performance loss, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
<b>Criteria B</b>	After test, the apparatus shell continues to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomenon below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. However, no change of operating state if stored data is allowed to persist after the test. If the manufacturer does not specify the minimum performance level or the permissible performance loss, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
<b>Criteria C</b>	Temporary loss of function is allowed, provided the functions is self-recoverable or can be restored by the operation of controls by the user in accordance with the manufacturer instructions. Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

### 3.2.1 Electrostatic Discharge (ESD) Immunity Measurement

The product was tested and met the requirements specified in EN 61000-4-2

#### - Measurement Procedures Utilized for ESD

The discharges shall be applied in two ways:

a) Contact discharges to the conductive surfaces and coupling planes:

The EUT shall be exposed to at least 200 discharges, 100 each at negative and positive polarity, at a minimum of four test points. One of the test points shall be subjected to at least 50 indirect discharges to the center of the front edge of the Horizontal Coupling Plane (HCP). The remaining three test points shall each receive at least 50 direct contact discharges. If no direct contact test points, then at least 200 indirect discharges shall be applied in the indirect mode. Test shall be performed at a maximum repetition rate of one discharge per second.

b) Air discharges at slots and apertures and insulating surfaces:

On those parts of the EUT where it is not possible to perform contact discharge testing, the equipment should be investigated to identify user accessible points where breakdown may occur. Such points are tested using the air discharge method. This investigation should be restricted to those area normally handled by the user. A minimum of 10 single air discharges shall be applied to the selected test point for each such area.

The basic test procedure was in accordance with IEC 61000-4-2:

- a) The EUT was located 0.1 m minimum from all side of the HCP (dimensions 1.6m x 0.8m).
- b) The support units were located another table 30 cm away from the EUT, but direct support unit was/were located at same location as EUT on the HCP and keep at a distance of 10 cm with EUT.
- c) The time interval between two successive single discharges was at least 1 second.
- d) Contact discharges were applied to the non-insulating coating, with the pointed tip of the generator penetrating the coating and contacting the conducting substrate.
- e) Air discharges were applied with the round discharge tip of the discharge electrode approaching the EUT as fast as possible (without causing mechanical damage) to touch the EUT. After each discharge, the ESD generator was removed from the EUT and re-triggered for a new single discharge. The test was repeated until all discharges were complete.
- f) At least ten single discharges (in the most sensitive polarity) were applied at the front edge of each HCP opposite the center point of each unit of the EUT and 0.1 meters from the front of the EUT. The long axis of the discharge electrode was in the plane of the HCP and perpendicular to its front edge during the discharge.

- g) At least ten single discharges (in the most sensitive polarity) were applied to the center of one vertical edge of the Vertical Coupling Plane (VCP) in sufficiently different positions that the four faces of the EUT were completely illuminated. The VCP (dimensions 0.5m x 0.5m) was placed vertically to and 0.1 meters from the EUT.

**- Test Setup**

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

### 3.2.2 Radiated Electromagnetic Field Immunity Test

The product was tested and met the requirements specified in EN 61000-4-3

#### - Measurement Procedures Utilized for RS

- 1) The testing was performed in a fully anechoic chamber. The transmit antenna was located at a distance of 3 meters from the EUT.
- 2) The frequency range is swept from 80 MHz to 1000 MHz, with the signal 80% amplitude modulated with a 1 KHz sine-wave. The rate of sweep did not exceed  $1.5 \times 10^{-3}$  decade/s, where the frequency range is swept incrementally; the step size was 1% of preceding frequency value.
- 3) The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.
- 4) The test was performed with the EUT exposed to both vertically and horizontally polarized fields on each of the four sides.

#### - Test Setup

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

<b>Equipment Tested</b>	<b>Laptop Computer</b>
Test Software	H pattern
Test Standard	EN 61000-4-3
Test Operator	Xingming zhao
Date of Test	2013-01-12
Relative Humidity	60%
Temperature	20°C
Atmospheric Pressure	101kPa

**-Test Results**

Test level: 3V/m

Steps: 1 % of fundamental

Dwell Time: 3 sec

<b>Range (MHz)</b>	<b>Modulation</b>	<b>Polarity</b>	<b>Position</b>	<b>Performance Criteria</b>	<b>Result (Pass/Fail)</b>
80-1000	Yes	H	B/F/L/R	A	Pass
80-1000	Yes	V	B/F/L/R	A	Pass

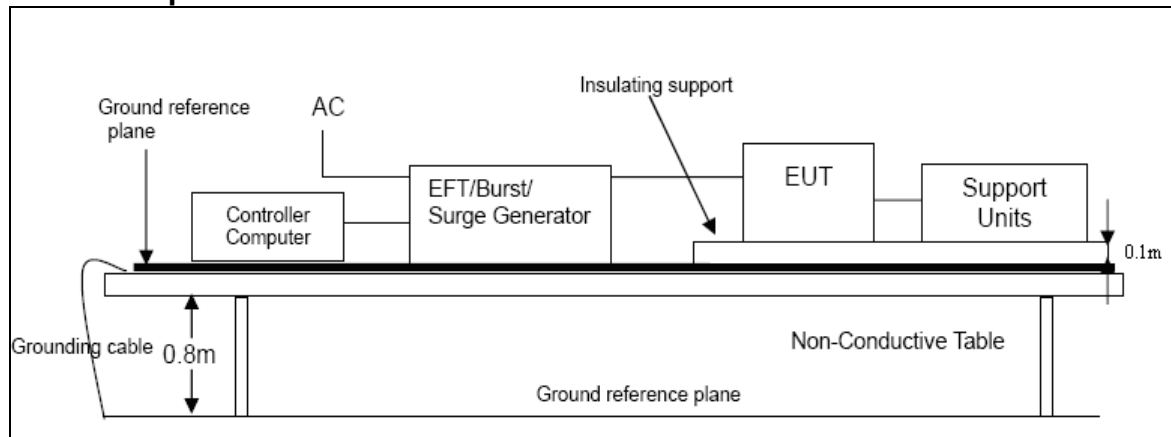

### 3.2.3 Fast Transient/Burst Immunity Test

The product was tested and met the requirements specified in EN 61000-4-4

#### - Measurement Procedures Utilized for EFT

- 1) Both positive and negative polarity discharges were applied.
- 2) The length of the “hot wire” from the coaxial output of the EFT generator to the terminals on the EUT should not exceed 1 meter.
- 3) The duration time of each test sequential was 1 minute.
- 4) The transient/burst waveform was in accordance with EN 61000-4-4, 5/50ns.
- 5) AC Power Cord uses 0.5m+/-0.05m long cable otherwise AC power cord is in accordance with manufacture.

N	± 1 KV	Direct	B	Pass
L + N	± 1 KV	Direct	B	Pass

### 3.2.4 Surge Immunity Test

The product was tested and met the requirements specified in EN 61000-4-5

#### - Measurement Procedures Utilized for Surge

1) For EUT power supply:

The surge is applied to the EUT power supply terminals via the capacitive coupling network. Decoupling networks are required in order to avoid possible adverse effects on equipment not under test that may be powered by the same lines, and to provide sufficient decoupling impedance to the surge wave. The power cord between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.

2) For test applied to unshielded un-symmetrically operated interconnection lines of EUT:

The surge was applied to the lines via the capacitive coupling. The coupling / decoupling networks didn't influence the specified functional conditions of the EUT. The interconnection line between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.

3) For test applied to unshielded symmetrically operated interconnection / telecommunication lines of EUT:

The surge was applied to the lines via gas arrestors coupling. Test levels below the ignition point of the coupling arrestor were not specified. The interconnection line between the EUT and the coupling/decoupling networks was shorter than 2 meters in length.

### 3.2.5 Conducted Disturbance, Induced Radio-Frequency Field

The product was tested and met the requirements specified in EN 61000-4-6

#### - Measurement Procedures Utilized for CS

The EUT shall be tested within its intended operating and climatic conditions.

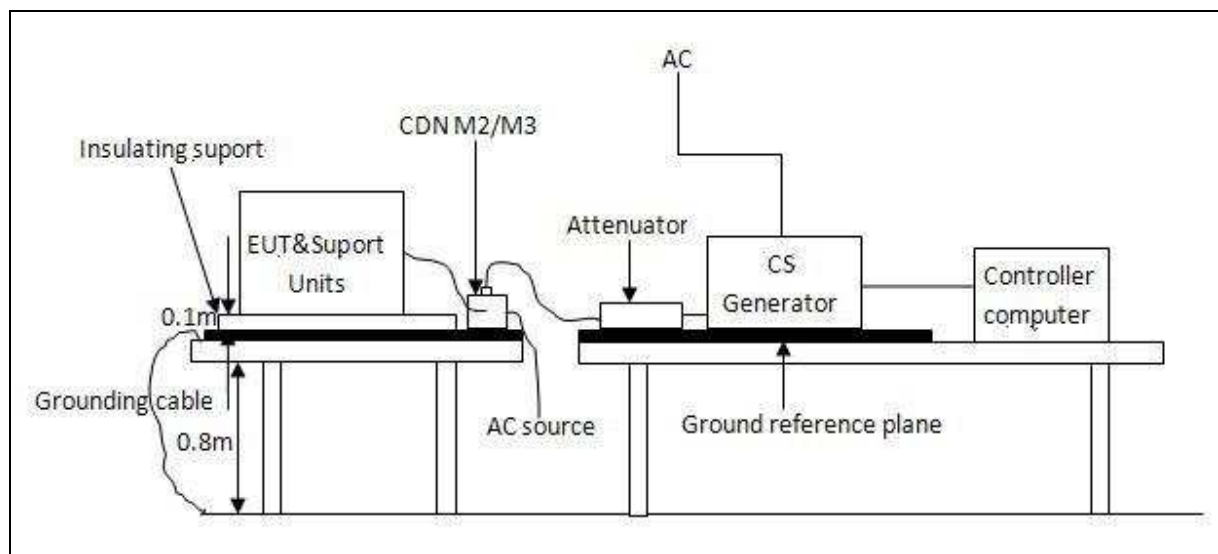

The test shall be performed with the test generator connected to each of the coupling and decoupling devices in turn, while the other non-excited RF input ports of the coupling devices are terminated by a 50-ohm load resistor.

The frequency range was swept from 150 kHz to 80MHz, using the signal level established during the setting process and with a disturbance signal of 80 % amplitude. The signal was modulated with a 1 kHz sine wave, pausing to adjust the RF signal level or the switch coupling devices as necessary. The sweep rate was  $1.5 \times 10^{-3}$  decades/s. Where the frequency range is swept incrementally, the step size was 1 % of preceding frequency value from 150 kHz to 80 MHz.

The dwell time at each frequency was less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies such as clock frequency (ies) and harmonics or frequencies of dominant interest, was analyzed separately.

Attempts were made to fully exercise the EUT during testing, and to fully interrogate all exercise modes selected for susceptibility.

#### - Test Setup

- Note:** 1). The EUT is setup 0.1m above Ground Reference Plane  
2). The CDNs and / or EM clamp used for real test depends on ports and cables configuration of EUT.  
For the actual test configuration, please refer to the related item –

<b>Range (MHz)</b>	<b>Field</b>	<b>Modulation</b>	<b>Performance Criteria</b>	<b>Result (Pass/ Fail)</b>
0.15-80	3V	Yes	A	Pass

### 3.2.6 Power Frequency Magnetic Field Immunity Test

The product was tested and met the requirements specified in EN 61000-4-8

#### - Measurement Procedures Utilized for PFMF

- 1) The equipment is configured and connected to satisfy its functional requirements. It shall be placed on the GRP with the interposition of a 0.1m-thick insulating support.
- 2) The equipment cabinets shall be connected to the safety earth directly on the GRP via the earth terminal of the EUT.
- 3) The power supply, input and output circuits shall be connected to the sources of power supply, control and signal.
- 4) The cables supplied or recommended by the equipment manufacturer shall be used. 1 meter of all cables used shall be exposed to the magnetic field.

#### - Test Setup

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

Z	1A/m	A	Pass

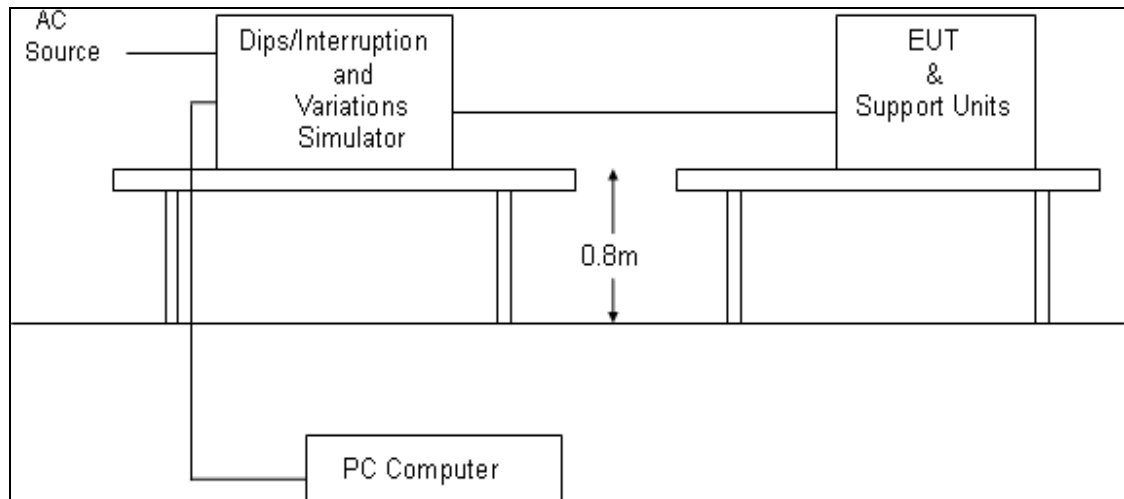

### 3.2.7 Voltage Dips / Short Interruptions and Interruptions Test

The product was tested and met the requirements specified in EN 61000-4-11

#### - Measurement Procedures Utilized for Dips

- 1) The EUT and support units were located on a wooden table, 0.8 m away from ground floor.
- 2) Setting the parameter of tests and then perform the test software of test simulator.
- 3) Conditions changes to occur at 0 degree crossover point of the voltage waveform.
- 4) Recording the test result in test record form.

#### - Test Setup

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.
